

VLADIMIR YAKIMOV

JAVA DEVELOPER

SHORT INFORMATION

I have experience in the development and implementation of highload, clustered, fault-tolerant systems in Java.

SKILLS

- Java
- Python, bash
- Hadoop, Spark, Hive, Cloudera
- Spring: Boot, Security, Web, JPA
- Jenkins, Ansible
- SQL, PostgreSQL, Flyway
- OOP, SOLID, REST, SOUP
- JUnit, Mockito
- Linux
- Docker
- Git, Maven, Jira, JProfiler
- Team management
- Task scheduling

EDUCATION

National Research Mordovian State University
name after N.P. Ogarova, Saransk,
Faculty of Electronic Engineering,
Automated systems data processing and
control. (2005 - 2010), Master

LANGUAGES

- Russian - native
- English - B1(intermediate), fluent

ADDRESS: Moscow, Russia

WORK EXPERIENCE

SBERBANK - TECHNOLOGIES HEAD ENGINEER

AUGUST 2020 - PRESENT

I work on a project that is actively used in the bank to access big data. The main task of the service is to overwrite, encrypt and tokenize fields to which the user does not have access. At the moment, the cluster is deployed on 120 hosts and proxies petabytes of data every day.

On the project I am involve in:

- Creation of complex features that affect the global behavior of the system. As well as features with a critical priority level.
- Team management, creation, distribution and supervision of tasks, conduction of Code reviews, mentorship of interns. Task planning, labour cost estimation.
- Replacement of team leader during his absence.
- Management of releases in Jira. Conduction of acceptance test meetings, protection of the implementation of features from the Cyber Security Experts. Supervision of release installation.
- Brief analysis of critical incidents. (If necessary, we roll out the hotfix release in two hours.)
- Load testing procedures
- Creation of ansible pipeline. Writing of docker files for functional testing environment.

ELAR CORPORATION DEVELOPER

JANUARY 2020 - AUGUST 2020

- Writing macros that adapt the elar-context system for certain tasks.
- Setting up and maintaining a context based on Tomcat with an environment (Elasticsearch, postgresql, OracleDb) on OS Linux.
- Support, refinement of the Spring backend of the National Electronic Library.

RADIUS DEVELOPER

AUGUST 2019 - DECEMBER 2019

- Development of a batch data loading framework.
- Writing modules for launching data upload processes using Spark, Hive, Sqoop.
